

Producing wood utility poles is what we do.

Now Koppers maintains them too.

Utility Services

We're here to make sure your wood utility poles last as long as possible.

Visual Inspections

As the first step in an effective pole maintenance program, visual inspections identify obvious aboveground issues. They also record useful information for the utility on the appearance of the pole – photographs and cataloging hardware.

Physical Inspections

Including sounding and boring with your visual inspection, you substantially increase your chances of identifying internal decay. Also, adding excavation even further improves the effectiveness of your inspection.

Groundline Treatments

When external decay is discovered, let Koppers treat it with preservative pastes or bandages. Our products have been proven to extend utility pole life.

Internal Treatments

Whether it's a liquid preservative, solid rod, or chemical fumigant, we'll internally treat any voids discovered during the inspection process. This combats insect attacks or further fungal decay.

To learn more about the services Koppers Utility Services provides or to schedule your utility pole maintenance, please contact your Koppers Utility Services representative.

KOPPERS

Utility Services

Managing your utility pole infrastructure, and more.

Koppers is the only company that can handle every aspect of your utility pole infrastructure.

Sustainability is our core purpose.

At Koppers, we believe in *Protecting What Matters. Preserving the Future.* This focus on sustainability comes to life in our full lifecycle management offerings for your utility poles. We harvest trees, we manufacture new poles, we dispose of used poles. And now we inspect and treat them. Our expertise in utility poles allows Koppers to give you a turn-key experience customized to your specific needs and budget.

Protecting what matters.

A cornerstone of our sustainability purpose is protecting your business, your utility grid. Your utility poles play an integral role in providing reliable electricity to the communities you serve – keeping hospitals and schools open and operational. Ensuring families have electricity and connectivity. We'll protect that trust the public has in you.

Preserving the future.

Your utility pole infrastructure has to last, and an effective maintenance program helps poles stay in the ground longer. The longer poles maintain their useful life, the fewer trees are harvested for new poles. So our inspections don't just help you continue to deliver vital services, they also help your business, and the earth, to prosper into the future.
