

Utility Services

A Comprehensive Approach to Utility Asset Management

Utility pole inspection

Check for decay and determine your poles' remaining strength with visual and physical inspections

Utility pole treatment

Extend the life of your poles with a variety of internal and external remedial treatments

Padmount transformer inspection and maintenance

Assess the exterior condition of your padmount transformers and restore them to a like-new state

Pole painting

Restore light poles and traffic signal poles to their previous appearance with a new coat of paint

Substation inspection

Ensure your substations are performing at optimal levels with regular inspections

Third party audit

Allow KUS to design and complete an audit to assess the quality of previous maintenance work

Storm assessment

Deploy KUS after a major storm event to check and document the state of your pole infrastructure

Overhead NESC compliance inspection

Ensure your system is compliant with the National Electric Safety Code

Pole attachment inventory

Know what's on your poles with an accurate inventory of all pole attachments
